iXware Scanning
Efficient scanning of documents with barcodes

iXWARE
INFORMATION EXCHANGE ™

Scanning with barcodes

Scanning documents is easy and efficient with the iXware Scanning's Barcode Module. You can use this module to:

- Separate different documents from a pile of paper on the feeder,

- Extract metadata from the barcode for efficient, automatic and faultless archiving. Metadata from the barcode can be used to automatically create filenames or folders. It can also be used to store documents directly in the right location of your business applications (Integration Module required).

Example:

The barcode above reads "INV JOHNSONINC". Using this barcode on an invoice from the company results in storing the document, for example, in a network folder: N:\invoices\Johnson Inc

Creating your own workflow is easy

Creating workflows with the iXware Scanning Barcode Module is easy. iXware recognizes a wide range of barcodes, including several free barcode fonts found on the internet. Configure the values of the barcode and output location using iXware's easy-to-use 'Xerox EIP Configurator' and start digitalizing your hardcopy documents.

Benefits

- **Efficient -** Faster scanning of stacks of documents using page seperators avoiding the need to scan every individual document.

- **Accurate -** Barcode use gives error free metadata for indexing.

- **Flexible -** Use multi-region, multi-barcode, and multi-page barcode values.

- **Dynamic -** Allows iXware to automatically process and route documents according to the barcode values.
